

## NXP@IMS 2015: RF for a Smarter World

May 4, 2015 2:24 PM ET

### 2015 IEEE MTT-S International Microwave Symposium May 17-22

The world's premier microwave conference features a large tradeshow, technical sessions, workshops and panel sessions covering a wide range of topics. Engineers and researchers from around the world will be in attendance, to discuss the developing technologies that support the microwave and RF industries. NXP will be there, delivering several papers about state-of-the-art achievements in RF.

IMS2015 is the perfect opportunity for you to see our expanding portfolio of reliable, affordable RF and microwave technologies. They ensure greater degrees of freedom in optimizing your design, and provide best-in-class RF solutions that help you reach new levels of performance. We also deliver all the tools engineers need to advance the standards of RF and microwave designs for a smarter world.

Visit booth #1141 to:

- See our latest RF solutions for base stations

- Experience live demos, see the latest products and development tools in Solid State RF energy application domain, a strategic growth area

- See what's new in our broadcast solutions portfolio

We will be showcasing all of these solutions and much more on May 19-21.

We look forward to seeing you at IMS2015. Please join us at our booth and discover how NXP can help you turn challenges into design opportunities.
