

## NEW! Motor Control brochure with application insights

May 11, 2015 2:21 PM ET

### MOSFETs, triacs, microcontrollers & logic for motor control

Industry 4.0 is only one of the aspects drastically changing the industrial landscape. Evolving applications like e-bikes and power tools raise the demand for highly efficient and reliable parts. We understand the challenges that industrial designers face when creating motor-control platform designs. For example you need to make sure they are flexible and can adapt quickly to different types of motors. Furthermore high accuracy is needed to guarantee performance in the most rugged systems.

This is why we created a new Motor Control brochure which demonstrates the spectrum of our products for motor control applications. It contains MOSFETs, triacs, microcontrollers and logic solutions all in one place.

You can download the brochure from our website, which includes clickable QR codes on the last page.

### Motor Control Solutions

MOSFETs, TRIACs, MCUs, LOGIC and much more Standard Products
