Thanks for joining us at ARM TechCon 2015

November 16, 2015 1:34 PM ET

At this year's ARM TechCon, we demonstrated the new Thread Connectivity Platform running ARM mbed OS for the IoT, as announced on November 9. This platform simplifies writing software to control hardware devices connecting to the cloud. It also makes it easy to create embedded connected solutions such as lighting and gateway devices for the IoT market.

In addition, we delivered a full day of training sessions on the following topics:

  LPCXpresso - Jumpstarting Your NXP MCU Project Development!
  Are You Ready for USB Type-C?
  Cloud Connectivity Simplified
  Growing Use Of Sensors And The Challenges Of Always-On Sensor Processing
  Introducing mBed-3.0 Thread Platform

Thank you again for joining us, we hope to see you next year!
