# World-thinnest medium-power Schottky rectifiers

## February 19, 2015 2:38 PM ET

We have just released six new medium-power 5-15A Schottky rectifiers (PMEGxEDP) in the CFP15 FlatPower package. Delivering ultra-low forward voltages and high current density in the thinnest package available (0.78 mm), these rectifiers are ideal for use in smartphone and tablet chargers.

#### Key features and benefits

Average forward current:  $IF_{AV} \le 5-15 A$ Reverse voltage:  $V_R \le 45-60 V$ High-power capability due to clip-bond technology and heat sink Small, thin SMD power plastic package, with height of 0.78 mm (typ) compared to 1.1 mm of competitor products Automatic optical inspection of solder joint due to tin-plated lead ends AECQ-101 qualified

## **Key applications**

Low-voltage rectification High-efficiency DC-to-DC conversion Switch-mode power supply (SMPS) Freewheeling applications Reverse-polarity protection Low-power applications
