### **NXP@IMS2015 RF for a Smarter World**

At the IEEE Microwave Symposium we had the pleasure of welcoming many customers and members of the press to our booth. All of our visitors got the chance to explore the latest innovations for RF and microwave.

We showcased some of our latest RF developments including an evaluation tool kit, a 250 W amplifier designed in an innovative package and LDMOS for S-Band radar.

At this year's event we introduced a range of technological advancements that were well received by customers and journalists:

- GaN
- Gen 9 LDMOS
- 3-D LED RF powered oven
- Plasma lighting

To help make finding the right product or discovering the most up-to-date innovations amongst our portfolio simpler, we have a number of ongoing online promotions. Take a look yourself and see how you can benefit from the various sample, demonstration board and webinar offers available.
